Brando Pakel

(408) 656-3736 | brando.pakel@gmail.com | brandopakel.com | github.com/brandopakel

EDUCATION

University of Southern California, Los Angeles, CA — Expected December 2028
M.S. Computer Science

University of Southern California, Los Angeles, CA — Graduated May 2023
B.A. Economics, Minor in Business Finance

SKILLS

Languages: Python, Go, Rust, C++, OCaml, JavaScript/TypeScript, and SQL across systems, data, and ML workloads
AI Tools & Coding Agents: Claude Code, Codex, Cursor, GitHub Copilot; OpenAI Responses API, GPT Image, and ComfyUI in production
Frameworks & Web: React, Next.js, Node.js, and FastAPI, building full-stack applications and PWAs from UI through API
Data, ML & Infrastructure: PostgreSQL, Redis, pandas, scikit-learn, LightGBM/XGBoost, Optuna, MLflow, PyO3, Docker, and Git
Media & Systems: FFmpeg and Blender automation pipelines, PyOpenGL rendering, and the RESP protocol (Redis wire format)
Business & Data Tools: Salesforce, Excel (advanced), BigQuery, dbt, Omni (BI), HubSpot, RingLead

EXPERIENCE

Sales Analyst — June 2026 – Present
MinIO — *Redwood City, CA*
- Audited the full data engineering flow across BigQuery, dbt, and Omni, surfacing data issues that were then corrected
- Work deeply in Salesforce, building and maintaining reports, dashboards, and views to track pipeline
- Perform heavy data analysis in Excel — pivot tables, lookups, and formulas — on deal and usage data
- Analyze sales, forecasting, and usage data in Python (pandas) to support revenue planning
- Develop Python deduplication tooling for HubSpot and RingLead to resolve stale, duplicate CRM records
- Publish internal dashboards in Omni (BI) surfacing pipeline and usage trends for leadership

Financial Analyst — Jan 2026 – Feb 2026
Wrapped Accounting (Startup) — *San Francisco, CA*
- Cleaned transaction-level data to identify classification errors, missing fields, and reporting gaps
- Rebuilt reporting frameworks from raw data to ensure accuracy and consistency across workstreams
- Automated recurring data tasks in Excel to reduce manual processing time and human error
- Delivered audit-ready outputs under tight deadlines while balancing multiple competing priorities

Client Trust Accountant — Nov 2023 – May 2025
The Gersh Agency — *Beverly Hills, CA*
- Maintained CRM accuracy across 50+ HNW client records, keeping required fields complete and current
- Reviewed account documentation daily to fix missing data, correct errors, and remove duplicates
- Coordinated cross-functionally with banking partners, agents, and internal teams on time-sensitive matters
- Streamlined workflows that improved data accuracy and turnaround times across the team
- Identified recurring data issues and proposed process fixes to prevent them going forward

Investment Operations Intern — Summer 2023
Strategic View Advisors — *Manhattan Beach, CA*
- Supported financial advisors by maintaining accurate client data in CRM across daily workflows
- Reconciled bank and general ledger accounts with meticulous accuracy under fast-moving deadlines
- Tracked client account activity and surfaced anomalies to advisors before they became problems
- Organized account data and documentation in preparation for client and investment reviews

PROJECTS

Omnivest — Institutional Portfolio-Intelligence Platform
Founder & Sole Engineer | github.com/brandopakel/omnivest-architecture
- Architected and solo-built a five-language trading platform (Go, Rust, C++, OCaml, Python) spanning ingestion, ML, and execution
- Deployed a fully local infrastructure stack (Postgres, Redis, no managed cloud) tracking ~20,000 instruments across 12 asset classes
- Designed a 31-stage training pipeline, from walk-forward cross-validation through promotion gates, deciding when a model goes live
- Instrumented GIPS-anchored live performance reporting for four competing engine families, publishing hourly with staleness flags
- Integrated live brokerage connectivity (Alpaca, IBKR, Hyperliquid) with fee models measured directly from each venue's account API

keel — Go In-Memory Cache & Analytics Service (RESP-Compatible)
Founder & Sole Engineer | github.com/brandopakel/keel
- Built a Go in-memory cache and analytics service speaking RESP2/RESP3 with a documented Redis command subset and Redis-matching errors
- Wrote an epoll/kqueue event loop with MULTI/EXEC transactions; multi-threaded I/O gives a measured 1.41x gain on large values
- Implemented HyperLogLog, Bloom, Count-Min, Cuckoo, and Morris sketches alongside hashes, lists, sets, sorted sets, and geo queries
- Built AOF persistence with torn-tail recovery and LRU/LFU eviction, with byte-budget accounting calibrated against real heap growth

AgentDocker — Local Orchestration for AI Agents
Founder & Sole Engineer | github.com/brandopakel/AgentDocker
- Built a native Rust platform: per-host daemon, CLI, and Iced desktop app that coordinate Claude Code, Codex, Gemini CLI, and Cursor
- Designed Docker-style agent primitives — registry, supervised processes, durable messaging, and time-limited leases on files, branches, and tasks
- Exposed the daemon over local IPC and a hand-rolled stdio MCP server so any vendor's agent can join without an SDK
- Persisted state in SQLite and shipped macOS, Linux, and Windows previews through CI with fuzzing and a Homebrew tap

GoGIF — Go-Native GIF Generator & Discovery App
Founder & Sole Engineer | github.com/brandopakel/gogifgenerator
- Shipped a Go-native GIF generator with four modes: pure-local procedural, cloud-sourced imagery, a full cinematic pipeline, and 3D export
- Connected free search across Wikimedia Commons, GifCities, the Prelinger Archive, and NASA through rights-aware adapters
- Wired ComfyUI Cloud (FLUX 1.1 Pro Ultra, Tripo/Hunyuan Partner Nodes) and GIPHY into the app for hosted generation and sticker search
- Persisted the asset catalog through my own keel project, falling back to an ephemeral in-memory store when unavailable

JSBitTorrentClient — BitTorrent Protocol from Scratch
github.com/brandopakel/JSBitTorrentClient
- Engineered a BitTorrent client in Node.js from scratch, implementing bencode parsing and info-hash computation for .torrent files
- Implemented the UDP tracker protocol and full peer wire protocol — handshake, choke/unchoke, bitfield, request/piece
